Indication: Iodochlorhydroxyquin-Hydrocortisone is for the topical treatment of certain skin disorders of the skin.

Use in Pregnancy: Animal reproduction studies have not been performed with Iodochlorhydroxyquin-Hydrocortisone. It is also not known whether Iodochlorhydroxyquin-Hydrocortisone is excreted in human milk. Because many drugs are excreted in human milk, caution should be exercised when Iodochlorhydroxyquin-Hydrocortisone is administered to a nursing woman.

Use in Children: The safety and effectiveness of Iodochlorhydroxyquin-Hydrocortisone, when applied to children, have been established by adequate and well-controlled clinical trials in children. Iodochlorhydroxyquin-Hydrocortisone is not intended for use in children under 2 years of age.

Use in Patients with Cardiovascular Disease: Iodochlorhydroxyquin-Hydrocortisone should be used with caution in patients with cardiovascular disease who may be sensitive to alterations in blood pressure.

Precautions: Iodochlorhydroxyquin-Hydrocortisone should be used cautiously in patients with cardiovascular disease who may be sensitive to alterations in blood pressure.

Contraindications: Iodochlorhydroxyquin-Hydrocortisone is contraindicated in patients with a history of hypersensitivity to Iodochlorhydroxyquin-Hydrocortisone, Iodochlorhydroxyquin, or other members of the related compounds.

Adverse Reactions: The most common adverse reactions associated with Iodochlorhydroxyquin-Hydrocortisone include: skin irritation, burning, stinging, redness, rash, itching, dryness, and eczema.

Overdosage: There have been rare reports of rash and hypersensitivity as well as thinning of the skin with easy bruising. Prolonged use may result in overgrowth of nonsusceptible organisms requiring appropriate therapy. In the presence of systemic infections, appropriate systemic antibiotics should be used.

Pharmacology: Topical corticosteroids should be used cautiously in patients with cardiovascular disease who may be sensitive to alterations in blood pressure. Iodochlorhydroxyquin-Hydrocortisone may cause severe atrophy of the skin and underlying tissue, which may be irreversible. Iodochlorhydroxyquin-Hydrocortisone should be used cautiously in patients with cardiovascular disease who may be sensitive to alterations in blood pressure. The safety and effectiveness of Iodochlorhydroxyquin-Hydrocortisone in children under 2 years of age have been established by adequate and well-controlled clinical trials in children. Iodochlorhydroxyquin-Hydrocortisone should be used with caution in patients with cardiovascular disease who may be sensitive to alterations in blood pressure.
